Research evolution - draft, not Edition A evidence

AI-assisted educational coursework; not investment advice.

The user selected Amazon after discussing META and asked for a new project from scratch. Instructor approval or an exception has not been verified. No original Amazon Edition A submission or instructor approval receipt was available for inspection. Therefore, no before/after score, original forecast, contemporaneous thesis or submitted baseline is claimed.

This draft was created with AI assistance on October 19, 2026 as a historical exercise with proposed information cutoff February 6, 2026. The source-to-input mapping, explicit assumptions, forecast, dashboard and automated checks are reviewable. This is preparation of a new analytical draft, not evidence of the student's independent learning history.

Student completion: if an authentic instructor exception exists, attach its evidence; otherwise preserve the missing-baseline disclosure. Identify authentic earlier evidence if it exists and explain changes in your own judgment with dated artifacts. This document does not recreate Edition A. Preserve this disclosure when converting to the required PDF.
